CS Research Seminar 2026

Organized by Yoshio Sano & Youhei Akimoto

(d-seminar@cs.tsukuba.ac.jp)

Special thanks to Prof. Neil Millar

Who should attend this seminar?

Applicable to: Doctoral students in CS seeking credit for:

- **Cross-Disciplinary Seminar in Computer Science [0BLD514]**
- **Note**: Registration via TWINS is mandatory.

Exceptions

- Students unable to attend this seminar for **valid reasons** may be exempt.
- **Examples:** Full-time employment, research stays at other institutions, etc.
- **Action Required:** Please consult your supervisor to verify if your reason for absence is sufficient.
- **Alternative:** You may take other approved courses to fulfill your degree requirements.

Objectives of this seminar

- **Improve your professional skills**
  - Presentation skills
  - Communication skills
- **Network with other doctoral students**
  - Learn about their research areas and interests
  - Observe different presentation and discussion styles
- **Find motivation for your research**
  - Remember: Presenting is an opportunity, not a burden!
  - Convey your enthusiasm for being here.

Your tasks in the seminar

1. **To give a presentation** on your research (once).
   - The presentation movie needs to be submitted a week before your presentation.
2. **To attend other students' presentations** and participate in the discussion (about 10 weeks).
   - Some students are assigned to watch the recorded movies before the presentation and give comments.
3. **To submit a lightweight report** (once).

Your presentation

Seminar Format: **Onsite (Hybrid)**

- Online (MS Teams) attendance is only allowed with good reasons (e.g., working students)

Presentation Length: **10 to 15 minutes**

Requirements:

- Prepare your presentation slides.
- Record a **10-minute rehearsal**.
- Upload both the slides and the rehearsal recording at least **one week before** your scheduled presentation date.

Expected Presentation Contents

- **Self-introduction**
- **BIG PICTURE**, consisting of:
  - Gentle introduction to your research field
  - (Possibly Personal) Motivation
  - Reasons why it is considered challenging
  - Your ideas (try not to be too detailed)

Attention

It is not a thesis defense!

- Do not need to impress the audience. Try to share your motivation and current limitations.

The audiences are not experts in your research topic.

- Try to make your presentation suitable for the audience.

→ Using the slides for *your master's defense* or *conference presentation* may not be suitable. Take it into account.

Discussion after your talk

All students are encouraged to ask questions:

- Don't be shy; if you don't understand something in the talk, it's not your fault, but the speaker's fault.
- Try to ask a short question; think what you want to say before start asking.
- Ask (at most) one question per talk; other attendees may want to ask questions to the speaker.
- Respect the speaker and other attendees.

<u>At the end of the discussion, Prof. Millar may possibly make comments on the presentation.</u>

Schedule

- Seminar Date/time: **Mondays 6th period** (16:45-18:00).
- 1st seminar: April 27 (Mon.) Prof. Millar's talk.
- (no seminar on May 8 (Fri.))
- 2nd seminar: May 11 (Mon.) Students' talks.
- There are around 10 seminars, but it depends on the number of registered students.

Schedule Arrangements

We will prepare a questionnaire on Manaba page.

1. Register for the course **0BLD514** on TWINS.
2. Go to the Manaba page for this course.
3. Find the questionnaire in ‘Survey’ and answer it by April 20th.

Your supervisor is encouraged to attend your talk.

- Please ask your supervisor when he/she can attend.

Inquiries should be sent to:

d-seminar@cs.tsukuba.ac.jp (Sano & Akimoto)
